INTERESTS

Full-Stack Developer and Tech Lead with 2+ years building and owning a production SaaS platform end-to-end — from feature development and system architecture to DevOps, cloud infrastructure, and team leadership. Led a team of 3 developers, managed all deployments on Vercel and Linux VPS, and handled Google Cloud Console, Sentry, and PostHog across the full product lifecycle. Deep expertise in Next.js, subscription systems, async worker pipelines, and payment integrations (Razorpay).

WORK EXPERIENCE

Full-Stack Developer & Tech Lead

Wallxy

03/2024 – Present

Nashik

Built and maintained a production SaaS platform for design professionals covering collaboration, file management, subscriptions, and content discovery:

- Led a team of 3 developers** — managed sprint planning, conducted code reviews, handled all Git merges and branch management, and ensured consistent code quality across the codebase.
- Owned all infrastructure and deployments** — managed production deployments on Vercel, maintained a Linux VPS running Dockerized backend workers, administered Google Cloud Console (APIs, Cloud Run, Pub/Sub), and monitored application health via Sentry and PostHog.
- Architected a full-stack SaaS covering projects, teams, gallery, company, blog, and QuickDesk modules with RBAC, granular permissions, and clean separation between UI, business logic, and data access layers.
- Developed production-grade Razorpay payment integration — full subscription lifecycle (trial → active → expired), ₹1 mandate verification, proration, add-ons, webhook handling, wallet/credits, and invoice generation.
- Built async worker infrastructure on Google Cloud Pub/Sub and Cloud Run for campaign execution, PDF-to-DWG conversion, subscription expiry, email delivery, and usage-based billing.
- Implemented technical SEO — meta tags, Open Graph, structured data, dynamic sitemaps, and page-level optimizations to improve search visibility and indexing.
- Built a multi-type Explore feed (ideas, catalog, gallery, brands, people) with Redis caching, real-time search, and trending content via cron-based feed workers.
- Developed the Brand Marketplace module end-to-end — brand profiles, slug/email-domain system, subscription plan integration, and explore discovery UI.
- Maintained test coverage with Jest (unit + integration) and Playwright (E2E) covering auth flows, payment scenarios, and a full 21-day subscription billing lifecycle.

Technologies: Next.js (App Router), React, TypeScript, Node.js, Tailwind CSS, Redux Toolkit (RTK Query), MongoDB/Mongoose, Firebase, Redis, Docker, GCP Pub/Sub, Cloud Run, Razorpay, BunnyCDN, Cloudinary, CloudConvert, Twilio, Puppeteer, Jest, Playwright

PERSONAL PROJECTS

Real-Time Financial Transaction Dashboard

- Developed a responsive dashboard using React JS integrating real-time data updates and interactive visualizations with Chart.js.
- Implemented state management with React Context API and ensured smooth integration with backend APIs.
